Cover Letter

Dear Hiring Team,

A bit about me:

Born and raised in an Amish community, I became the first of 107 cousins to attend college. I graduated with degrees in Engineering and Technology with Highest Distinction, a Purdue University *Top 50 Student*.

My Career as a Full-Stack Web and Mobile App Software Engineer / C# .NET Developer:

In 2019, I launched *Puzld*, my Xamarin mobile app installed in 64 countries with zero crashes. In my first professional role, I built a proprietary CRM tablet app in half the expected project time. Since then, I've maintained enterprise applications, delivering clean, scalable code with a strong end-user focus.

A bit more about me:

I've gained global perspectives from living on four continents and studying in five countries. A proud member of The Magic Circle in London, I've performed as a magician around the world, enhancing my creative thinking, problem-solving skills, and the ability to connect with diverse audiences.

I thrive in cross-functional environments, collaborating effectively across design, engineering, and business teams. Learning and discovery remain insatiable passions, and I'm eager to use data and technology to develop solutions for today's tech industries.

I'm actively considering roles that take advantage of my:

- Extensive technical expertise, with 3+ years' experience as a software dev/engineer
- Demonstrated exceptional strength in analyzing data
- Public speaking skills
- Masters-level knowledge of Human Computer Interaction (HCI)/human psychology

My professional achievements, interdisciplinary academics, and unique personal experiences have equipped me with a remarkable blend of hard and soft skills—fostering a deep appreciation for diverse viewpoints.

I'm excited to contribute my technical skills, user-centered insights, and creative problem-solving abilities with positive energy—to maximize impact on my next team.

Thanks for your time and consideration!

Best,

James D. Schwartz
